

Annex 6 BIODIVERSITY – 3

The conservation objectives of the protected natural area of community interest, where they have been established by management plans

Table 1. The conservation status of the habitats and species for which the sites have been designated

I	ROSCI0022	ROSCI0053	ROSCI0071	ROSCI0172	ROSCI0278	ROSCI0319	ROSCI0353	ROSCI0412
3130 - Oligotrophic to mesotrophic standing waters with vegetation of the <i>Littorelletea uniflorae</i> and/or of the <i>Isoeto-Nanojuncetea</i>	Unknown							
3140 - Hard oligo-mesotrophic waters with benthic vegetation of <i>Chara spp</i>	Unknown							
3150 - Natural eutrophic lakes with <i>Magnopotamion</i> or <i>Hydrocharition</i> -type vegetation	Preferred		Unfavorable					
3160 - Natural dystrophic lakes and ponds					Preferred			
3260 - Water courses of plain to montane levels with the <i>Ranunculion fluitantis</i> and <i>Callitricho-Batrachion</i> vegetation				Unknown				
3270 - Rivers with muddy banks with <i>Chenopodion rubri pp</i> and <i>Bidention pp</i> vegetation	Preferred				Preferred			
40C0* - Ponto-Sarmatic deciduous thickets	Unfavorable-inadequate		Unfavorable	Unfavorable-inadequate				
62C0* - Ponto-Sarmatic steppes	Unfavorable-inadequate	Unfavorable-inadequate	Unfavorable	Unfavorable	Unfavorable -bad			
6430 - Hydrophilous tall herb fringe communities of plains and of the montane to alpine levels	Unknown		Unknown	Unknown				
6440 - Alluvial meadows of river valleys of the <i>Cnidion dubii</i>	Preferred

ROSCI0071 Dumbrăveni - Valea Urluia - Lacul Vederoasa, ROSPA001 Aliman – Adamclisi, ROSPA007 Balta Vederoasa

The objective of Management Plans¹ is to provide a reference source for development plans or projects contained within ANPIC or in their proximity, providing information related to:

- documenting and recording the requirements regarding the conservation of habitats and species that were the basis of the ANPIC designation, so that it can be clearly individualized what is protected and why?
- the analysis of the socio-economic and cultural context at the ANPIC level and the interactions generated by land use and the needs of the species and habitats for which the ANPIC was designated
- defining the conservation objectives of ANPIC
- identification of practical conservation management solutions able to integrate conservation activities with those associated/derived from land use

According to the proposed Management Plan, the following general objectives were established:

- OG1. Ensuring the conservation of habitats and species, in the sense of achieving and/or maintaining their favorable conservation status
- OG2. Updating the database of information/data related to the habitats and species for which the site has been declared - including their conservation status - in order to provide the necessary support for the management of biodiversity conservation and the evaluation of management efficiency
- OG3. Technical and administrative objectives (Correlated functioning of administrative structures, Materialization of boundaries on the ground and their maintenance, etc.)
- OG4. Management objectives (Elaboration/update of the Strategy and Action Plan regarding communication, ecological education and public awareness, Implementation of the Strategy and Action Plan regarding communication, ecological education and public awareness)
- OG5. Objectives aimed at sustainable development (Promoting the sustainable use of forest resources / adaptation of forestry works to conservation needs, Promoting the sustainable use of fisheries - reeds, water quality and level, management methods, Promoting the sustainable use of meadows - pastures, hay fields, Promoting the use sustainable development of agricultural lands, Promoting a sustainable urban development of localities located on the territory or in the vicinity of the site, Promoting the sustainable exploitation of construction materials from the territory of the protected natural area - ballast, quarries, including the provisions of the management plan, Promoting the realization and commercialization of traditional products)
- OG6. Objectives to promote visitation (Elaboration of the Visitor Management Strategy, Implementation of the Visitor Management Strategy)

For each general objective previously chosen, at least one specific measure was defined that will contribute to the achievement of the specific objective. The specific measure was expressed by an activity or by a restrictive measure. The specific measures/management measures were adapted according to the intensity of the effect of the activities with an impact on the protected natural area, in the sense that for the same activity, the management measures may differ depending on the intensity of the impact, respectively high or low.

The activity produces a concrete result for the fulfillment of a specific objective and is carried out in a certain moment or time interval.

Restrictive measure introduces an obligation/constraint in support of the fulfillment of the general measure All restrictive measures defined for a general measure will be applied with the same priority regardless of the order in which they were chosen/defined.

Areas have also been associated with some specific measures:

- implementation - if this was expressed through an activity,
- regulatory - if this was expressed through a restrictive measure.

Some specific measures were associated with:

- one or more species that are targeted by the specific measure

¹ see NEEI

- one or more habitats that are targeted by the specific measure
- one or more impacts for the reduction or elimination of which this specific measure is necessary.

Going through the general objectives proposed within the Management Plan, a convergence of the proposed project with:

- OG1. Ensuring the conservation of habitats and species, in the sense of achieving and/or maintaining their favorable conservation status
*The measures to reduce the impact, assumed by the project owner and integrated into the intimate structure of the implementation process, ensure the long-term conservation of species and habitats; a preventive management is applied aimed at curbing any manifestation of the negative impact on the potentially affected species
 Measures are taken to reduce the impact and ecological restoration that meet the ecological requirements of some species, thus creating the premises for generating a potentially positive impact.*
- OG2. Updated inventories for higher plants
By undertaking some monitoring measures, the project creates the conditions for improving the level of knowledge of the natural heritage at the local level.
- OG5. Objectives aimed at sustainable development.
*The employment policy, especially of members of the local community, represents an element of convergence with the principle of Promoting the sustainable use of natural resources for the benefit of communities.
 The method of approach of the project maintains exact convergence with the secondary objective regarding the Promotion of the sustainable exploitation of construction materials on the territory of the protected natural area - ballast, quarries, with the inclusion of the provisions of the management plan.*

ROSCI0172 Pădurea și Valea Canaraua Fetii – Iortmac, ROSPA0054 Lacul Dunăreni

According to the proposed Management Plan, the following general objectives were established:

- OG1 Ensuring the conservation of habitats and species for which the site was declared, in the sense of achieving and/or maintaining their favorable conservation status;
- OG2 Updating the information/data base regarding the habitats and species for which the site was declared - including their conservation status - in order to provide the necessary support for the management of biodiversity conservation and the evaluation of management efficiency;
- OG3 Ensuring effective long-term site management;
- OG4 Increasing the level of awareness - improving knowledge and changing attitude and behavior for interested groups that have an impact on biodiversity conservation;
- OG5 Promoting the sustainable use of natural resources, which provides support for species and habitats of conservation interest;
- OG6 Creating opportunities for sustainable tourism through natural and cultural values.

For each general objective previously chosen, at least one specific measure was defined that will contribute to the achievement of the specific objective. The specific measure was expressed by an activity or by a restrictive measure.

The specific measures/management measures were adapted according to the intensity of the effect of the activities with an impact on the protected natural area, in the sense that for the same activity, the management measures may differ depending on the intensity of the impact, respectively high or low.

The activity produces a concrete result for the fulfillment of a specific objective and is carried out in a certain moment or time interval.

Restrictive measure introduces an obligation/constraint in support of the fulfillment of the general measure All restrictive measures defined for a general measure will be applied with the same priority regardless of the order in which they were chosen/defined.

Areas have also been associated with some specific measures:

- implementation - if this was expressed through an activity,
- regulatory - if this was expressed through a restrictive measure.

Some specific measures were associated with:

- one or more species that are targeted by the specific measure
- one or more habitats that are targeted by the specific measure
- one or more impacts for the reduction or elimination of which this specific measure is necessary.

Going through the general objectives proposed within the Management Plan, a convergence of the proposed project with:

- OG1. Ensuring the conservation of habitats and species, in the sense of achieving and/or maintaining their favorable conservation status

The measures to reduce the impact, assumed by the project owner and integrated into the intimate structure of the implementation process, ensure the long-term conservation of species and habitats; a preventive management is applied aimed at curbing any manifestation of the negative impact on the potentially affected species

Measures are taken to reduce the impact and ecological restoration that meet the ecological requirements of some species, thus creating the premises for generating a potentially positive impact.

- OG2. Updated inventories for higher plants

By undertaking some monitoring measures, the project creates the conditions for improving the level of knowledge of the natural heritage at the local level

- OG5. Objectives aimed at sustainable development.

The employment policy, especially of members of the local community, represents an element of convergence with the principle of Promoting the sustainable use of natural resources for the benefit of communities.

The method of approach of the project maintains exact convergence with the secondary objective regarding the Promotion of the sustainable exploitation of construction materials on the territory of the protected natural area - ballast, quarries, with the inclusion of the provisions of the management plan.

ROSCI0022. ROSCI0053

- OG1. Ensuring the conservation of habitats and species, in the sense of achieving and/or maintaining their favorable conservation status
- OG2. Updating the database of information/data related to the habitats and species for which the site has been declared - including their conservation status - in order to provide the necessary support for the management of biodiversity conservation and the evaluation of management efficiency
- OG3. Ensuring effective long-term site management
- OG4. Raising awareness - improving knowledge and changing attitude and behavior for interested groups that have an impact on biodiversity conservation;
- OG5 Promoting the sustainable use of natural resources, which provides support for species and habitats of conservation interest;
- OG6 Creating opportunities for sustainable tourism through natural and cultural values.

For each general objective previously chosen, at least one specific measure was defined that will contribute to the achievement of the specific objective. The specific measure was expressed by an activity or by a restrictive measure.

The specific measures/management measures were adapted according to the intensity of the effect of the activities with an impact on the protected natural area, in the sense that for the same activity, the management measures may differ depending on the intensity of the impact, respectively high or low.

The activity produces a concrete result for the fulfillment of a specific objective and is carried out in a certain moment or time interval.

Restrictive measure introduces an obligation/constraint in support of the fulfillment of the general measure All restrictive measures defined for a general measure will be applied with the same priority regardless of the order in which they were chosen/defined.

Pentru ROSCI0071

Dumbrăveni – Valea Urluia – Lacul Vederosa, ROSPA0036 Dumbrăveni, ROSPA0001 Aliman - Adamclisi, RONPA 2.361 Pădurea Dumbrăveni, RONPA 2.350 Pereții calcaroși de la Petroșani, RONPA 2.351 Locul fosilifer Aliman and IV.30 Lacul Vederosa.

However, the elements of natural heritage defined for national protected areas remain overlooked, the whole conservation approach being passed under the umbrella of protection of sites of conservation interest that are part of the pan-European Natura 2000 network.

A review of these elements was made synthetically, in tabular form in accordance with the provisions of Circular 4654/02.07.2020 and the accompanying Addendum, in the annexes accompanying this documentation.

Starting from the analysis of the potential impact of the analyzed project on the criterion elements that were the basis for the designation of the sites, a possible impact (including positive) on a limited number of criterion elements was

retained (see section 2.2.2. Discussions on the presence, location, population species and habitats of community interest potentially affected by the project).

The specific conservation objectives remain (as we have shown above – see section 2.4 Data on the structure and dynamics of populations of affected species) set in an intuitive at least haphazard way, in conditions where no known of certain data on the presence, distribution, population levels or other indicators and criteria that are the basis of the approximation of this parameter. On several occasions, it was indicated that for the clarification of the situation, a term (typically 2 years) should be assumed for the purpose of clarifying the issues.

Thus, the specific conservation objectives proposed at the level of the sites must be seen as a first step, frail, hesitant, in the direction of ensuring a status of favorability of the criterion elements that were the basis for the designation of the sites.

Even under these circumstances, it could be assessed, in a robust manner, that at least with regard to the specific conservation objectives, as they were proposed at the level of the sites, through the implementation of the project, no categories of negative impact are induced to the extent lead to a significant impairment of species populations or areas covered by habitats.
